

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

*Author of Tables of the Reciprocals of Numbers  
from 1 to 100,000, &c.*

LONDON:

CHARLES AND EDWIN LAYTON,  
FLEET STREET.

1870.

1871, 2. 65

## NOTICE.

---

THESE Tables give, by inspection, the true rate of Interest realised on Loans bearing a nominal half-yearly rate of  $1\frac{1}{2}$ , 2,  $2\frac{1}{2}$ , 3,  $3\frac{1}{2}$ , 4, and  $4\frac{1}{2}$  per Cent., such Loans being issued at a discount of from 1 to 30 per Cent., and repayable by any number of drawings not exceeding sixty.

The Tables also give, by inspection, the half-yearly interest on Terminable Debentures having not more than 30 years to run, when the rates of nominal Interest and Discount are within the above-stated limits.

And they furnish a ready means of obtaining the like results under other conditions of Rates and Discounts.

## ON THE USE OF THE TABLES.

---

THE object in view is, when we have given the cost per cent. of a bond or obligation, the nominal rate of interest it bears, and the period of redemption, to determine the rate realized by the investment; in other words, to find the rate at which the purchase-money would require to be improved in order to produce the returns guaranteed by the bond.

Tables which should answer this question *by inspection*, for every possible combination of the data, would obviously be of enormous extent. It might be too much to say that, owing to their great extent, the construction of such tables would be impracticable; but fortunately it is unnecessary to put the practicability to the test. It will be found that by means of the tables here given, nearly, if not quite, all questions of this class likely to arise in practice, admit of easy solution. The subjoined tables, in fact, consist merely of a register of examples, corresponding to regular intervals in the values of the several data, with their answers; so that any question proposed, which is not, with its answer, immediately found in the tables, is solved by an easy interpolation.

In using the tables, four distinct cases present themselves, every question that may arise falling under one or other of these, according to the nature and the extent of the agreement of its data with the registered data. These cases will be dealt with in order.

---

### CASE I.

When, along with the term, the price per cent. and the nominal rate are found in the tables.

In this case the answer is got by inspection. On the opening corresponding to the price, in the column headed by the term, and opposite the nominal rate, is found the realized rate required.

*Ex. 1.* A bond for £500, redeemable in twenty years, at par, and yielding  $2\frac{1}{2}$  per cent. per half-year, is purchased for £450. Required the rate realized.

The price per cent. here is 90, ( $450 \div 5$ ), and the nominal rate  $2\frac{1}{2}$  per cent. On the opening corresponding to 90, under 40 (half years), and opposite 2.5, is found  $2.928 = \text{£}2. 18s. 7d.$ , which is the realized rate per half-year. Its double,  $5.856 = \text{£}5. 17s. 1d.$ , may be taken as the rate per annum.

In subsequent examples, the plan will be adopted of setting down the data and the result in the following order:—

|                   |                       |                  |                   |
|-------------------|-----------------------|------------------|-------------------|
| Cost<br>Per Cent. | Term<br>(Half-years). | Nominal<br>Rate. | Realized<br>Rate. |
|-------------------|-----------------------|------------------|-------------------|

Thus, Example 1 and its result would be symbolised as follows:—

|    |    |     |                               |
|----|----|-----|-------------------------------|
| 90 | 40 | 2.5 | $2.928 = \text{£}2. 18s. 7d.$ |
|----|----|-----|-------------------------------|

More examples under this case are unnecessary.

---

### CASE II.

When the price per cent. and the term, but not the nominal rate, are found in the tables.

For this case the rule may be given as follows:—Find the results corresponding to the given price (and term), and each of the two tabular rates next below and next above the given rate. The required rate will occupy the same relative position between these results that the given rate occupies between the two tabulated rates, and may be found by interpolation.

This will be made plain by one or two examples.

*Ex. 2.* A bond for £1,000, redeemable at par in eighteen years, and yielding  $2\frac{3}{4}$  per cent. per half-year, is purchased for £930. Required the rate realized.

Here the price is 93, and the nominal rate is between 2·5 and 3 per cent. Therefore,

$$\begin{array}{cccc} 93 & 36 & 2\cdot5 & 2\cdot812 \\ \text{,,} & \text{,,} & 3\cdot0 & 3\cdot337 \end{array} \left. \vphantom{\begin{array}{cccc} 93 & 36 & 2\cdot5 & 2\cdot812 \\ \text{,,} & \text{,,} & 3\cdot0 & 3\cdot337 \end{array}} \right\} \text{Dif. } \cdot525.$$

Here the given rate is midway between the two tabular rates, and hence the required rate will be midway between the two results, and will therefore be obtained by adding to the less of these results half the difference between them. We thus get  $2\cdot812 + \cdot263 = 3\cdot075 = \text{£}3. 1s. 6d.$  for the half-yearly rate required.

The final interpolation will not always be so simple as in this example. It is therefore necessary to be provided with a general method which will be applicable in all cases.

It is a question in simple proportion. Thus, if we take the above example and say—If an increase of ·5 in the tabular rate give an increase of ·525 in the result, what increase in the result will be given by an increase of ·25 in the tabular rate? we get the following proportion :—

$$\cdot5 : \cdot25 :: \cdot525 : \cdot26250;$$

the fourth term being obtained as usual by dividing the product of the second and third ( $\cdot25 \times \cdot525 =$ )  $\cdot13125$ , by the first, ·5.

But this process may be simplified. The first term of the proportion in this case is always ·5. Hence, since multiplication by 2 gives the same result as division by ·5, we may always employ the easier operation; and the quantity to be added to the less tabular rate will consequently be twice the product of the two increments, observing to strike off from the right hand as many figures as there are decimal places in the excess of the given rate over the lower of the two tabular rates.

Thus,  $\cdot25 \times \cdot525 \times 2 = \cdot26250$ , which, on striking off two figures (the number of decimal places in ·25), becomes ·263, as before, to be added to 2·812.

*Ex. 3.* Required the rate realized on the above bond when the nominal rate is  $3\frac{1}{8}$  ( $=3\cdot125$ ) per cent.

The nominal rate is here between 3 and 3·5 per cent. Hence,

$$\begin{array}{r r r r} 93 & 36 & 3 & 3'337 \\ " & " & 3\cdot5 & 3'863 \end{array} \left. \vphantom{\begin{array}{r r r r} 93 & 36 & 3 & 3'337 \\ " & " & 3\cdot5 & 3'863 \end{array}} \right\} \text{Dif. } \cdot526.$$

Therefore  $(3\cdot125 - 3) \cdot 125 \times \cdot526 \times 2 = \cdot131500$ , which on striking off *three* figures (the number of decimal places in  $\cdot125$ ) becomes  $\cdot132$ . Adding this to  $3\cdot337$  we get  $3\cdot469 = \text{£}3. 9s. 5d.$  for the half-yearly rate required.

### CASE III.

When the nominal rate (and the term), but not the price per cent., is found in the Tables.

We here first find the result corresponding to the nominal rate and each of the two prices to which the given price is intermediate; and the quantity to be subtracted from the greater of these results is then found by interpolation.

*Ex. 4.* A bond for  $\text{£}1,000$ , paying  $3\frac{1}{2}$  per cent. and redeemable in 12 years at par, is purchased for  $\text{£}935$ . Required the rate realized.

Here the price is  $93\cdot5$ , between 93 and 94, and the nominal rate is  $3\cdot5$ . Therefore,

$$\begin{array}{r r r r} 93 & 24 & 3\cdot5 & 3'957 \\ 94 & " & " & 3'889 \end{array} \left. \vphantom{\begin{array}{r r r r} 93 & 24 & 3\cdot5 & 3'957 \\ 94 & " & " & 3'889 \end{array}} \right\} \text{Dif. } \cdot068.$$

The question to be solved here is this:—Since an increase of unit in the price gives a diminution of  $\cdot068$  in the result, what diminution will  $\cdot5 (= 93\cdot5 - 93)$  give?

Hence  $1 : \cdot5 :: \cdot068 : \cdot0340$ .

And subtracting  $\cdot034$  from  $3'957$ , we get  $3'923 = \text{£}3. 18s. 6d.$  for the required half-yearly rate.

In the proportions which arise in this case, the first term is always unit, being the common difference of the tabular prices per cent. The working of the proportion is therefore reduced to the simple multiplication of the second and third terms. And as many figures as there are decimal places in the excess of the given price over the lower of the two tabular prices being cut off

from the product, the last figure retained will be in the third decimal place.

To apply this to the last example,

$$.5 \times .068 = .0340, \text{ which we call } .034.$$

Attention to the direction as to the cutting off of superfluous figures obviates the necessity of attending to the position of the decimal point in the factors. Thus  $5 \times 68 = 340$ ; and cutting off *one* figure, because the factor 5 consists of *one* place, we get 34; which, the last figure being as above in the *third* decimal place, must be written .034.

*Ex. 5.* Find the realized rate when the above bond is purchased for £937. 10s. 0d. = 937.5.

Here the price per cent. is 93.75, and the nominal rate as before, 3.5. Therefore,

$$\begin{array}{r} 93 \quad 24 \quad 3.5 \quad 3.957 \\ 94 \quad \text{"} \quad \text{"} \quad 3.889 \end{array} \left. \vphantom{\begin{array}{r} 93 \\ 94 \end{array}} \right\} \text{Dif. } .068.$$

$93.75 - 93 = .75$ ;  $.75 \times 68 = 51.00$ , which is to be written .051, because .75 consists of two places of figures.

Hence  $3.957 - .051 = 3.906 = \text{£}3. 18s. 1d.$ , the rate required.

*Ex. 6.* A bond for £500, paying  $2\frac{1}{2}$  per cent. per half year, and redeemable at par in  $10\frac{1}{2}$  years, is bought for £427. 15s. 0d. = 427.75. Required the rate per cent. realized.

$427.75 \div 5 = 85.55$ , the price per cent., and the nominal rate is 2.5. Hence,

$$\begin{array}{r} 85 \quad 21 \quad 2.5 \quad 3.523 \\ 86 \quad \text{"} \quad \text{"} \quad 3.448 \end{array} \left. \vphantom{\begin{array}{r} 85 \\ 86 \end{array}} \right\} \text{Dif. } .075.$$

$85.55 - 85 = .55$ ;  $.55 \times 75 = 41.25$ , written .041.

Hence  $3.523 - .041 = 3.482 = \text{£}3. 9s. 8d.$ , the half-yearly rate required.

#### CASE IV.

When (the term being known) neither the price per cent. nor the nominal rate is found in the Tables.

Here we first find, by Case II., the realized rate corresponding to

the given rate and each of the two prices to which the given price is intermediate; and then, in the manner of Case III., using the two rates deduced, we find the rate required, being that corresponding to the given price.

*Ex. 7.* A bond for £500, yielding  $2\frac{3}{4}$  per cent. per half-year, and redeemable at par in fifteen years, is bought for £451. 15s. Required the rate realized.

Here  $451.75 \div 5 = 90.35$ , the price per cent., and the nominal rate is  $2\frac{3}{4} = 2.75$ . Therefore,

$$\begin{array}{cccc} 90 & 30 & 2.5 & 3.011 \\ & & 3.0 & 3.547 \end{array} \left. \vphantom{\begin{array}{cccc} 90 & 30 & 2.5 & 3.011 \\ & & 3.0 & 3.547 \end{array}} \right\} \text{Dif. } .536.$$

$$2.75 - 2.5 = .25; 25 \times 536 \times 2 = 26800, \text{ say } .268.$$

$$\text{Hence, } 3.011 + .268 = 3.279,$$

which is the rate corresponding to

$$90 \quad 30 \quad 2.75.$$

Again,

$$\begin{array}{cccc} 91 & 30 & 2.5 & 2.957 \\ & & 3.0 & 3.489 \end{array} \left. \vphantom{\begin{array}{cccc} 91 & 30 & 2.5 & 2.957 \\ & & 3.0 & 3.489 \end{array}} \right\} \text{Dif. } .532.$$

$$2.75 - 2.5 = .25; 25 \times 532 \times 2 = 26600, \text{ say } .266.$$

$$\text{Hence, } 2.957 + .266 = 3.223,$$

and this is the rate corresponding to

$$91 \quad 30 \quad 2.75.$$

Now, combining these results:—

$$\begin{array}{cccc} 90 & 30 & 2.75 & 3.279 \\ 91 & & & 3.223 \end{array} \left. \vphantom{\begin{array}{cccc} 90 & 30 & 2.75 & 3.279 \\ 91 & & & 3.223 \end{array}} \right\} \text{Dif. } .056.$$

$$90.35 - 90 = .35; 35 \times 56 = 1960, \text{ say } .020.$$

$$\text{Hence, } 3.279 - .020 = 3.259, \text{ or } \pounds 3. 5s. 2d., \text{ the rate required.}$$

*Ex. 8.* A bond for £450, paying  $3\frac{1}{4}$  per cent. per half-year, and redeemable at par in twelve and a half years, is purchased for £420. Required the rate realized.

Here  $420 \div 4.50 = 93.33$ , is the price per cent., and the nominal rate is 3.25.

$$\begin{array}{cccc} 93 & 25 & 3 & 3.421 \\ & & 3.5 & 3.946 \end{array} \left. \vphantom{\begin{array}{cccc} 93 & 25 & 3 & 3.421 \\ & & 3.5 & 3.946 \end{array}} \right\} \text{Dif. } .525.$$

$$3.25 - 3 = .25; 25 \times 525 \times 2 = 26250, \text{ say } .263.$$

$$\text{Hence, } 3.421 + .263 = 3.684, \text{ the first result.}$$

Again,

$$\begin{array}{r} 94 \quad 25 \quad 3 \quad 3'359 \\ \text{"} \quad \text{"} \quad 3'5 \quad 3'879 \end{array} \left. \vphantom{\begin{array}{r} 94 \\ \text{"} \end{array}} \right\} \text{Dif. } \cdot 520.$$

$$25 \times 520 \times 2 = 26000, \text{ say } \cdot 260.$$

And  $3'359 + \cdot 260 = 3'619$ , is the second result.

Combining these results:—

$$\begin{array}{r} 93 \quad 25 \quad 3'25 \quad 3'684 \\ 94 \quad \text{"} \quad \text{"} \quad 3'619 \end{array} \left. \vphantom{\begin{array}{r} 93 \\ 94 \end{array}} \right\} \text{Dif. } \cdot 065.$$

$$93'33 - 93 = \cdot 33; 33 \times 65 = 2145, \text{ say } \cdot 021.$$

Therefore,  $3'684 - \cdot 021 = 3'663$ , or £3. 13s. 3d., the rate required.

Under this case will generally fall to be treated instances in which the bond, in all the previous examples supposed redeemable at par, is to be paid off at the end of the term with a specified premium. In such instances, the actual amount of the bond being the nominal amount *plus* the premium, the nominal rate of interest, which is reckoned on the nominal amount, must be modified so as to correspond with the actual amount.

The method of proceeding will be illustrated by the following examples.

*Ex. 9.* A bond for £1,000, yielding  $3\frac{1}{2}$  per cent. per half-year, and redeemable in fourteen and a half years, at a premium of 10 per cent., is purchased for £975. Required the rate of interest realized.

The amount receivable on the bond being £1,100, the price per cent. is  $975 \div 11 = 88'64$ . Also, the interest on the nominal amount being 3'5 per cent., that on the actual amount is  $35 \div 11 = 3'182$ .

Therefore,

$$\begin{array}{r} 88 \quad 29 \quad 3 \quad 3'680 \\ \text{"} \quad \text{"} \quad 3'5 \quad 4'225 \end{array} \left. \vphantom{\begin{array}{r} 88 \\ \text{"} \end{array}} \right\} \text{Dif. } \cdot 545.$$

$$3'182 - 3 = \cdot 182; 182 \times 545 \times 2 = 198380, \text{ say } \cdot 198.$$

Hence,  $3'680 + \cdot 198 = 3'878$ , first result.

Again,

$$\begin{array}{r} 89 \quad 29 \quad 3 \quad 3'619 \\ \text{"} \quad \text{"} \quad 3'5 \quad 4'160 \end{array} \left. \vphantom{\begin{array}{r} 89 \\ \text{"} \end{array}} \right\} \text{Dif. } \cdot 541.$$

$$182 \times 541 \times 2 = 196924, \text{ say } \cdot 197.$$

Hence,  $3'619 + \cdot 197 = 3'816$ , second result.

Finally, combining these results,

$$\begin{array}{r r r r} 88 & 29 & 3\cdot182 & 3\cdot878 \\ 89 & " & " & 3\cdot816 \end{array} \left. \vphantom{\begin{array}{r r r r} 88 & 29 & 3\cdot182 & 3\cdot878 \\ 89 & " & " & 3\cdot816 \end{array}} \right\} \text{Dif. } \cdot062.$$

$88\cdot64 - 88 = \cdot64$ ;  $64 \times 62 = 3968$ , say  $\cdot040$ .

Hence,  $3\cdot878 - \cdot040 = 3\cdot838$ , or £3. 16s. 9d., is the half-yearly rate required.

*Ex.* 10. A bond for £1,000, yielding  $2\frac{1}{2}$  per cent. per half year, and redeemable in thirteen and a half years, at a premium of 25 per cent., is purchased for £1,020. 10s. 0d. Required the rate realized.

The actual amount of the bond here is £1,250. Hence,  $1020\cdot5 \div 12\cdot50 = 81\cdot64$  is the cost per cent., and  $28\cdot75 \div 12\cdot50 = 2\cdot30$  is the nominal rate per cent.

Therefore,

$$\begin{array}{r r r r} 81 & 27 & 2 & 3\cdot042 \\ " & " & 2\cdot5 & 3\cdot614 \end{array} \left. \vphantom{\begin{array}{r r r r} 81 & 27 & 2 & 3\cdot042 \\ " & " & 2\cdot5 & 3\cdot614 \end{array}} \right\} \text{Dif. } \cdot572.$$

$2\cdot3 - 2 = \cdot3$ ;  $3 \times 572 \times 2 = 3432$ , say  $\cdot343$ .

Hence,  $3\cdot042 + \cdot343 = 3\cdot385$ , first result.

Again,

$$\begin{array}{r r r r} 82 & 27 & 2 & 2\cdot980 \\ " & " & 2\cdot5 & 3\cdot547 \end{array} \left. \vphantom{\begin{array}{r r r r} 82 & 27 & 2 & 2\cdot980 \\ " & " & 2\cdot5 & 3\cdot547 \end{array}} \right\} \text{Dif. } \cdot567.$$

$3 \times 567 \times 2 = 3402$ , say  $\cdot340$ .

Hence,  $2\cdot980 + \cdot340 = 3\cdot320$ , second result.

Combining,

$$\begin{array}{r r r r} 81 & 27 & 2\cdot3 & 3\cdot385 \\ 82 & " & " & 3\cdot320 \end{array} \left. \vphantom{\begin{array}{r r r r} 81 & 27 & 2\cdot3 & 3\cdot385 \\ 82 & " & " & 3\cdot320 \end{array}} \right\} \text{Dif. } \cdot065.$$

$81\cdot64 - 81 = \cdot64$ ;  $64 \times \cdot065 = \cdot04160$ , say  $\cdot042$ .

Hence,  $3\cdot385 - \cdot042 = 3\cdot343$ , or £3. 6s. 10d., is the half-yearly rate required.

It is believed that enough has now been done to enable any one having occasion for their results, at the cost of a small amount of care and attention, to acquire the power of using the tables with facility and advantage.

*Scholium.*

The correctness of the table may be proved by the following considerations:—

The purchaser of a bond at a discount acquires a right to a stated half-yearly payment during a specified term, and also to the full amount of the bond at the end of that term. It is hence evident that the actual interest per cent. consists of the stated interest, plus a differential rate, that, if regarded as an annuity to be laid up as it accrues, would at the expiration of the term amount to the difference between the sum advanced to the lender and that repaid to the borrower.

For example.—A bond for £100, bearing half-yearly interest at  $3\frac{1}{2}$  per cent., and payable at par in five years, is purchased for £80. Required the half-yearly rate of interest *per cent.* realized by the investment. Here the stated interest is  $\frac{100 \times 3\frac{1}{2}}{80} = 4.375$  per cent. Consequently, an actual advance of £100 would have realized £4.375 half-yearly interest, and as the advance of £80 would have been repaid by  $80 + \frac{80}{4} = £100$  at the end of the term, so an advance of £100 would have to be repaid by  $100 + \frac{100}{4} = £125$ .

From a reference to the table, page 41, col. 10 gives the realized half-yearly rate 6.25 per cent., the differential rate is therefore  $6.25 - 4.375 = 1.875$ , and it will be found that an annuity of £1.875, or £1. 17s. 6d., payable half-yearly, laid up at 6.25 per cent. interest, would at the end of five years amount to £25.

Similarly in any case the table may be verified.
